## PROFILE

Master's graduate in Industrial Engineering (Computer Science), graduated with distinction, with a six-month AI engineering internship behind me. I build AI-powered products end to end — TypeScript full-stack applications on one side, LLM and machine learning pipelines on the other. Looking to build a career in AI engineering in a team that ships fast.

## TECHNICAL SKILLS

**Languages:** TypeScript, JavaScript, Python, C++, C#
**Frontend:** React Native (Expo), SolidJS, Tailwind CSS, Vite
**Backend:** Node.js, SolidStart (SSR & server actions), Prisma ORM, Auth.js, JWT, Zod, REST APIs
**AI / LLM:** Mistral API, prompt engineering & batch prompting, PDF-to-text ingestion, model benchmarking (ROC/AUC vs. tabular baseline), LSTM, MediaPipe, scikit-learn
**AI-assisted dev:** Cursor (daily driver), Claude Code, GitHub Copilot
**Tools:** Git, Docker, Linux (Kali, Ubuntu, Manjaro), LaTeX (advanced)

## PROJECTS

### AppL — Full-stack TypeScript web & mobile application

Gamified quest-and-progression app, built as two clients on one data model.

- **Web:** SolidStart / SolidJS with server-side actions, Prisma ORM with versioned migrations, Auth.js authentication, bcrypt password hashing and JWT sessions, Zod schema validation, Tailwind CSS.
- **Mobile:** Expo / React Native in TypeScript — file-based routing, native navigation, image handling and local persistence.

### AI Job Matching Platform — LLM + ML, benchmarked

Candidate-to-job matching engine with swipe-based interaction.

- Ingests raw PDF résumés, extracts and structures the content, and scores candidate–offer fit using the **Mistral API** with batched prompting.
- Built a **tabular ML baseline** on recruitment data and **benchmarked the LLM approach against it with ROC curves** on a hand-labelled test set — measuring the gain rather than assuming it.
- Tracked energy and carbon cost of inference; containerised with Docker.

## EXPERIENCE

### Artificial Intelligence Engineer (Internship) — AYOURIS, Feb–Jun 2026

Built a real-time French Sign Language to text and speech translation system, combining a webcam MediaPipe pipeline with an ESP32 instrumented glove.

- LSTM trained on 16 sign classes: **98.2% hold-out accuracy**, **84% across 5 unseen signers** — evaluated cross-signer to measure real generalisation, not just fit.
- Shipped the full pipeline: data collection, training, evaluation, hardware-free replay mode for demos, and a pytest suite.

*github.com/Prota0202/Hand-Talk-Translator*

### DevOps Engineer (Internship) — AYOURIS, Jan–Feb 2026

Worked on migrating the Nawat Prime SaaS platform to a high-availability clustered architecture — fault tolerance, disaster recovery, and near-zero downtime during maintenance and upgrades.

### Cyber Security Intern — Expert Systech, 2023

Documented industrial network and building infrastructure end to end: Cisco switches, camera systems, server room and KNX installations (ETS). Wrote technical procedures and user documentation; first-line support.

### Engineering Project Supervisor — ECAM Brussels, Jan–Jun 2025

Mentored first-year engineering students through a full project cycle, coaching them on communication and teamwork.

### Student jobs alongside full-time studies — 2019–2026

Worked continuously throughout my bachelor's and master's degrees across retail, pharmacy, hospitality and industrial sites.

## EDUCATION

**Master in Engineering, Computer Science** — ECAM Brussels, 2024–2026 · *graduated with distinction*
**Bachelor of Industrial Engineering** — ECAM Brussels, 2021–2024
**Dutch evening courses** — La Maison du Néerlandais, Brussels, 2021–2022

## LANGUAGES

French: native (C2) · English: fluent (C1) · Arabic: native (C2) · Dutch: A2 — solid passive comprehension, actively working on speaking
